

## iPRIVACY Number Service – An Instant and Effective Solution to Protect Your Phone and Restore your Privacy!

*iPRIVACY Number is a Simple & Affordable Solution to Protect Your Phone Against Unwanted Incoming calls*

Miami, FL, November 11, 2015 — Tired of answering calls from random people? Hi Q Telecom Inc. (HQTelecom) has just launched a new service as a solution to this, the Incoming Privacy or iPRIVACY Number; an innovative call filtering system designed to provide the best possible protection against unwanted calls.

The iPRIVACY number service requires customers to call forward their existing phone numbers to their new iPRIVACY numbers. Forwarded calls are automatically filtered using the Caller ID information on the calls. It can be used in one of two modes: BLACKlist or WHITelist. In BLACKlist mode, calls can go through three (3) blacklists before reaching their iPRIVACY number. In the WHITelist mode, only calls from previously defined phone numbers ring their iPRIVACY numbers. All other calls are sent directly to your voicemail.

"The iPRIVACY number service was designed to provide consumers with instant protection against thousands of thieves, scam artists, and unsolicited callers

bombarding their privacy,” says Alfredo Purrinos, former NASA scientist and chief engineer of the iPRIVACY number service. "Since all call blockers available in the market today require a lot of time and effort to build a meaningful blacklist, the iPRIVACY services instant protection provides an excellent upgrade.”

According to the Federal Trade Commission (FTC), the number of phone-related fraud and scams complaints have significantly increased in recent years. Nearly 5% of all the people in the U.S. age 16 and older have been victims of identity theft frauds or so-called imposter scams.

“People need effective solutions to be able to protect themselves against increasing phone scams and frauds,” says Mr. Purrinos. “With the iPRIVACY number service, people can regain their privacy and take control of their incoming calls”.
